Work experience

Senior Software Developer
2019-04 - 2019-07

Laterooms.com

During my short but sweet stay, I worked on .NET Core Web APIs running on docker containers and using Kubernetes/Rancher to deploy them. All development was done through TDD, pair programming and refactoring before merging a pull request. Also, there was an 'infrastructure as code' culture where we used the best in class tools like Terraform and Consul from HashiCorp.

Senior Software Contractor
2018-03 - 2019-03

Bet365

I have been part of the Basketball Back Office Team at bet365 where I have worked on their core service-oriented systems. Main technologies include WPF, ASP.NET, ZeroMQ and Windows Services. SQL performance was a big part of my day-to-day work as well.

Senior Developer
2017-07 - 2018-03

Betfred

As soon as I started I began running brown bag sessions for the devs at Betfred who were working on a new project then. I did presentations on SOLID and other useful technologies like Moq framework and the feedback was great. I have also transformed their DevOps strategies for one of their projects to enable continuous delivery by making sure faster and more robust deployments are in place. The whole dev department lacked a good central logging server/system which made me push for using Graylog as our main centralized logging server which has served us very well because no longer we need to search multiple log files to track errors and everything is correlated using a correlation ID.

Senior Developer
2015-05 - 2017-07

Topcashback

At Topcashback I have learnt new things both from a technical point of view and a nontechnical one. I have learnt how to work with document-based databases such as RavenDB in conjunction with AngularJS which has been very useful. Not only I learnt AngularJS but also learnt how to organize such a client-side project using best practices(i.e. by feature rather than by type). In terms of non-technical experience, it has been an interesting journey as I learnt a lot from the experienced consultant that was with us for a few months. For example, I learnt how to deal with clients effectively and what questions to ask in order to find out the requirements.

Software Developer
2014-07 - 2015-05

Kitbag Ltd

From the start, I was involved in the full software development cycle using agile methodologies like Scrum and Kanban and have learnt a lot from the Scrum Master. I have worked on several exciting and new projects such as providing tracking functionalities for customer orders which consist of multiple systems talking to each other via web services. As the team strongly advocates the use of the latest Design Patterns and Best Practices I got to practice my knowledge about DI and TDD.

Graduate Software Developer
2012-12 - 2014-07

HCSS Education

Summary

A senior .NET Developer with over 6 years of experience behind him who is very passionate about best practices and design patterns including SOLID principals, TDD, XP and Agile.

Technical Skills

Expert	Intermediate	Basics
.NET Core	ReactJS	Kubernetes
Web API	AngularJS	Redux
RESTful	Webpack	Less/SASS
C#/VB	Gulp	Docker
TeamCity	GoCD	Rancher
Octopus Deploy	NoSQL	Elasticsearch
TDD/XP	Bootstrap	
SOLID	RabbitMQ	
Agile	SQL Server Performance	

Non-Technical Skills

- Excellent team spirit and communication skills as a result of working in a team of 6 developers and liaising with business consultants

- Mentoring & teaching junior developers, I have presented SOLID principles to junior developers at Topcashback among others during personal development time slots

- Excellent time and project management skills as a result of delivering 6 projects

Education

B.Sc (Hon) in Computer Systems w/ Software Engineering   2009 - 2012
University of York
